## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the abovereferenced application.

## Listing of Claims:

1. (Original) Plasmatron-catalyst apparatus for generating hydrogen-rich gas comprising:
a plasmatron; and

at least one catalyst for receiving an output from the plasmatron to produce hydrogen-rich gas, wherein said at least one catalyst is located at a position downstream from the plasmatron so as to be activated by hydrogen and radicals produced by the plasmatron.

- 2. (Original) The apparatus of claim 1 wherein the plasmatron includes means for receiving as an input air, fuel and water/steam.
- 3. (Original) The apparatus of claim 2 wherein the plasmatron includes means for receiving exhaust gas from an engine or fuel cell.
- 4. (Original) The apparatus of claim 1 wherein the at least one catalyst includes means for receiving as an input air, fuel and water/steam.
- 5. (Original) The apparatus of claim 4 wherein the at least one catalyst includes means for receiving exhaust gas from an engine or fuel cell.

- 6. (Original) The apparatus of claim 2 wherein the at least one catalyst includes a heat exchanger in heat exchange relation with the catalyst to preheat the air, fuel and water/steam.
- 7. (Previously presented) The apparatus of claim 1 including a plurality of catalyst sections, wherein each catalyst section receives air/fuel or water/steam.
- 8. (Original) The apparatus of claim 1 further including a fuel cell for receiving the hydrogen-rich gas, the hydrogen-rich gas having reduced CO content.
- 9. (Original) The apparatus of claim 8 wherein the plasmatron-catalyst apparatus is in a vehicle.
- 10. (Original) The apparatus of claim 8 wherein the plasmatron-catalytic system is stationary.
- 11. (Original) The apparatus of claim 1 wherein the plasmatron is followed by a fuel injection system for a partial oxidation process, the fuel injection system followed by said at least one catalyst, said at least one catalyst followed by means for water/steam injection and a water-shifting catalyst whereby hydrogen concentration is increased and CO concentration is decreased.

- 12. (Original) The apparatus of any of claims 1-11 wherein said at least one catalyst is selected from the group consisting of a water-shifting catalyst, a partial oxidation catalyst and a steam reforming catalyst.
- 13. (Original) The apparatus of claim 11 wherein said at least one catalyst is a combination of a partial oxidation catalyst, a steam reforming catalyst and a water-shifting catalyst.
- 14. (Original) The apparatus of claim 13 wherein the steam reforming catalyst is followed by the water-shifting catalyst with additional water/steam injection prior to the water-shifting catalyst.
- 15. (Original) The apparatus of claim 2 wherein the water/steam is obtained from oxidizing hydrogen in a fuel cell or by combustion in an engine.
- 16. (Original) The apparatus of claim 15 wherein said combustion in an engine includes combustion in a diesel engine.
- 17. (Original) The apparatus of claim 2 wherein the water/steam is obtained from the exhaust from a diesel engine.
- 18. (Original) The apparatus of claim 1 wherein the hydrogen-rich gas is used for reduction processes in metallurgy and chemistry.

- 19. (Original) The apparatus of claim 1 wherein the hydrogen-rich gas is used for hydrogenation as in food processing and fuel upgrading.
- 20. (Original) The apparatus of claim 1 further including a non-thermal catalytic reaction element to selectively oxidize CO to CO<sub>2</sub>.
- 21. (Original) The apparatus of claim 11 wherein said at least one catalyst is a combination of a partial oxidation catalyst, a steam reforming catalyst, and a water-shifting catalyst, wherein water/steam is added between each of the catalysts.
- 22. (Original) The apparatus of claim 13 wherein the steam reforming catalyst is followed by the water-shifting catalyst without additional water/steam injection prior to the water-shifting catalyst.
- 23. (Previously presented) The apparatus of claim 1 further including an engine positioned downstream from said at least one catalyst and wherein said hydrogen rich gas is delivered to said engine.
- 24. (Original) The apparatus of claim 1 wherein said position of the at least one catalyst is within 1 to 10 cm downstream from the plasmatron.

- 25. (Original) Plasmatron-catalyst apparatus for generating hydrogen-rich gas comprising: a plasmatron; and
  - a catalytic converter containing at least one catalyst for receiving an output from the plasmatron to produce hydrogen-rich gas, wherein said at least one catalyst in said catalytic converter is located at a position downstream from the plasmatron and is activated by hydrogen and radicals produced in the output of the plasmatron.
- 26. (Original) The apparatus of claim 25 wherein said at least catalyst in said catalytic converter is further activated and/or preheated by the enthalpy of the output of the plasmatron.
- 27. (Original) The apparatus of claim 25 wherein said plasmatron-catalyst apparatus operates in conjunction with an internal combustion engine.
- 28. (Original) The apparatus of claim 25 wherein the plasmatron-catalyst apparatus is in a vehicle.
- 29. (Original) The apparatus of claim 25 wherein said position of the at least one catalyst is within 1 to 10 cm downstream from the plasmatron.

30. (Previously presented) Plasmatron-catalyst apparatus for generating hydrogen-rich gas comprising:

a plasmatron; and

at least one catalyst for receiving an output from the plasmatron to produce hydrogen-rich gas, wherein said at least one catalyst is located at a position downstream from the plasmatron so as to be activated by hydrogen and radicals produced by the plasmatron, wherein said position of the at least one catalyst is within 1 to 10 cm downstream from the plasmatron.
